Top 5 Reasons

Why Juniper MX Security is Right for You

JUNIPER NETWORKS

Strengthened Overall Security Posture

While your current infrastructure may have some form of security in place, it needs to be well-equipped with greater scale, visibility, and intelligence to better defend against advanced cyber threats.

This is what Juniper MX security gives you—designed to modernize your security infrastructure by consolidating routing and security functions onto the same platform. With MX Security offerings, you can easily extend security capabilities to the new distributed edge to protect against new threats.

Improved Scale and Performance

Connectivity is more important than ever before—which means your network needs to move faster and be always-on.

Adding security to your favorite MX platforms gives you the high speed performance and scale you need, while improving availability by protecting against attacks that may cause downtime.

Greater Cost Savings

We want you to get more from your investment with the MX platforms. So, we've designed our MX security solution to give you just that—leverage what you already have.

By simply adding security capabilities onto your existing MX platforms, you can enjoy savings from both CapEx and OpEx. CapEx savings come from extending the life-time value of the existing hardware platform. OpEx savings come from the power and space efficiency with services consolidation.

Simplified Operations

Say goodbye to toggling between multiple devices, multiple user interfaces, and management platforms when managing your routers and security appliances separately.

MX security consolidates all major security and routing services onto one platform, making the day-to-day operations of your network infrastructure much simpler. And if you desire, logical separation is available, too!

Monetize as a Service

It's time to go beyond connectivity and offer your customers greater value-add and peace of mind.

- **MX-SPC3 Security Services Card** empowers you with market-leading scale and performance, so you'll be able to serve even greater numbers of customers and services

- **Juniper-Corero Joint DDoS Protection Solution lets you** offer customers managed DDoS protection services with access to a self-service portal and comprehensive per-tenant visibility

- **Juniper SecIntel** can be offered to customers for advanced security to filter out malicious IPs and URLs, with intelligence from Juniper ATP cloud, Juniper Threat Labs and custom third-party threat feeds
